982.		Hayley	Stewart	<p>I'm writing to declare my opposition to the application from Nelson Aggregate to create two new open-pit mines in Burlington's escarpment.</p> <p>I'm sure there are other letters that will put this slightly more eloquently, but simply said, we cannot continue the harmful extraction processes that have led to the climate crisis</p>

				<p>we live in today. Our attempts at repairing and restoring disturbed sites from mining operations have never been able to undo the damage that is done to these environments, not to mention the risks for contamination and disruption of groundwater. More than ever, we need our local governments and organizations to stand up to protect our environment and make it known that short-term financial gain will not be allowed to take precedence over the health of our ecosystems, our water bodies, and future generations. This land is a UNESCO World Biosphere Reserve and frankly, I find it appalling that this proposal has even landed on your desks.</p> <p>I can't do much beyond writing this letter, but I know that you take pride in your duty to protect these important, rich lands. Please do the right thing.</p>

1041.	x	Gabrielle	Bernardi-Dengo	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I have lived in Burlington for the past twenty four years. Regularly I hiked and enjoy Mount Nemo and the other many natural treasures associated with the Niagara Escarpment such as bird watching and identifying the flora and fauna this very special environment hosts. I make a point of sharing this beautiful part of the world with my grandchildren and I intend to do all I can to preserve this special UNESCO Biosphere/Heritage Sight for them and their children and in fact all our grand and great-grandchildren. It is an outrage that continuing to ruin the Escarpment is even being considered.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. 1101.	x	Leanne	Ropp	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p>

				<p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

1113.	x	Carolyn	Tripp	<p>I'm writing to declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>Ontario has enough aggregate and mining operations to last us well through this century. I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. My family's home is by an open gravel pit. To construct it, the operation decimated old growth forest and natural habitats. Dust is now a constant in the summer. Its impact is devastating and on-going. Additionally there has been no assessment in our area of well water - something that rural residents rely on each and every day to ensure quality of life. Burlington is no different.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>If the pandemic has taught us anything, essentials should be close to home. Food is essential to survive. Aggregate is not.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the</p>

				<p>Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

1156.		Helene	Keller	<p>When we moved to our present location at [REDACTED], we knew the Nelson quarry was there and accepted the reality. However, over the years, it became more and more disrupting. But when one of the panels on our Bay window cracked during one of their blasting, and Nelson/Lafarge Co. shrugged its responsibility, we felt, and still do, that one cannot trust the quarry company. Our letter reflects our personal experience, not so much with individual employees, but with the Nelson/Lafarge consortium. If they don't take care of little things, such as a broken window, what will they do when global warming gets worse and big problems arise? We should be avoiding problems and look for solutions.</p> <p>Nelson/Lafarge intends to excavate for several more decades when we should reduce the need for quarries. Instead of using gravel and cement to build new highways and inefficient homes, why can't we find better ways to deal with transportation and construction problems. If we continue business as usual and expand the Nelson/Lafarge quarry, what will happen to our neighbourhood, to our wells, to the natural landscape, to Mount Nemo? We are old now and probably won't see the worst of the damage, but the next generation of Burlington and Halton, for that matter, all Ontarians, will have lost a</p>

				<p>jewel of the Niagara Escarpment.</p> <p>At the time of a pandemic, scientists and health professional tell us that people need open spaces more than ever. What good is a quarry when Ontario taxpayers will have to spend billions on health care cost because they can't breathe clean air, can't drink clean water, and worry about food shortages because the farms are gone.</p> <p>Excavating a UNESCO BIOSPHERE is neither a benefit nor a solution. As steward of the Niagara Escarpment, we ask NEC that you protect the Mount Nemo Plateau and reject Nelson/Lafarge's application to expand the quarry.</p> <p>Thank you for your time and consideration of these concerns.</p>

1427.		Mark	Taylor	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>Our family is opposed to the Nelson / Lafarge application to blast 2 new open pit quarries in the Niagara Escarpment at Mount Nemo in North Burlington.</p> <p>Our home has been in our family for over 63 years (since 1953) and 3 generations of Taylors have enjoyed all the wonders of the rural Burlington countryside. We are hoping a 4th generation will be able to enjoy this serene natural paradise as well.</p> <p>We are located a mere 2.8 km from the Nelson quarry on beautiful Bronte Creek and we rely on well water.</p> <p>We have a 1/2 acre property and are proud environmental stewards. We manage this by restoring biodiversity by planting native trees, shrubs, native plants and removing invasive species.</p> <p>Burlington, along with countless municipalities, have declared a climate emergency in light of unprecedented natural disasters and biodiversity loss. Approving a 124 acre quarry expansion, is not in keeping with this goal.</p> <p>We love Halton and are fortunate to have access to the spectacular hiking, walking and cycling offered by the escarpment and rural lands.</p> <p>Our family counts on nature to help us keep perspective in these COVID times, while witnessing rapidly expanding, hard-surfaced suburbia and increasingly less greenspace.</p> <p>We object to blowing up the Escarpment for corporate gain. The Escarpment is known internationally for its ecological and natural heritage uniqueness. A UNESCO World Biosphere Reserve should be protected with all our might.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our</p>

				<p>living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

1495.		Eric	Trask <p>To the Niagara Escarpment Commission,</p> <p>I am writing to urge you to oppose the recent application (file 505-04/20) made by Nelson Aggregate to change the Official Plan designation and to expand their North Burlington operations. My reasons for opposition are thus:</p> <p>The notion that the impact of this application going forward will only affect a small neighbourhood is wrong - the truck traffic alone will have a major impact upon everyone living in the immediate area of No. 2 Sideroad, as well as on Guelph Line from as far as Dundas St. to Campbellville. The village of Lowville was established over a hundred and seventy years ago, and an average weekday will see anywhere from thirty to eighty gravel trucks per hour grinding and stalling their way up the steep hills toward the quarry, or inversely popping their engine brakes as they speed away from the quarry and down the hill into the village - and this is at a time when the only real truck traffic to the quarry is bringing in fill and other secondary activities unrelated to extraction. What will it be like when extraction traffic is added to the volume?</p> <p>I have read accounts where local residents are being accused of NIMBYism. To my mind such remarks are of no real value when trying to assess the pros or cons of any given project and should be ignored whenever present. People lived in the area long before a mineral extraction permit was awarded to the company and I presume that the effects of</p>

				<p>their increased activity over the years has impacted the area well beyond what was originally imagined. Who better to be a steward of the land than a resident? Also, the area isn't just a few people's "Backyard". It is a designated "World Biosphere" and a backyard to thousands of hikers and visitors every month. People from Burlington, Milton, Brampton, Hamilton and beyond come here daily. Do we need to sacrifice this for the profits of a few?</p> <p>There are already much larger quarries within twenty minutes to the north and to the west supplying the exact product, which translates to an average delivery of said product to sites within almost the same travel time and distance. So, the argument about a negative environmental impact due to excessive hauling distances is invalid. Plus which, the other pits have a much better and safer access to main roadways.</p> <p>Also, a quarry will definitely affect those who are dependent upon the water resources beyond the 120 meter envelope, and I avow that the only people who would argue the point are those who are not going to be dependent upon the resource. What catastrophe awaits the home owner dependent upon Nelson's 'well quality guarantee' when their well is failing due to Nelson's activity? A twenty-four hour water delivery guarantee – such comfort! And when that doesn't happen because Nelson can easily attribute your problem to any number of issues that are your concern alone – who will the homeowner turn to then for reparation, the city? Add to this water issue the very deep concern local residents have for the monitoring of the fill which comes in to the quarry daily. There is an enormous amount of water that is being pumped out of the pit at the west end of Colling Road making its way all through the local waterways, which in turn affects the water for a huge number of homes all the way to Bronte Creek and Burlington Bay. Is there sufficient monitoring to ensure no toxic elements are being deposited with this fill?</p> <p>The reasons to deny the application are many, but here are just a few more:</p> <p>There is the very real danger that heavy trucks travelling through Lowville present to residents (especially to children loading school busses at blind stops). An addendum to this reality is that roughly twenty-five years ago Guelph Line was being considered for widening and greater arterial usage, but this route was ultimately deemed to be too costly and unfit. So why create an opportunity that encourages heavy vehicles to use a potentially hazardous and undesirable route?</p> <p>It is in fact a nuisance application - the very fact that Nelson has put forward yet another version of a similar application within less than a decade of being denied their last one (one that cost local residents a great deal of time, money and anguish to get it denied),</p>
--	--	--	--	--

				<p>suggests that the amounts of money to made by them if the project goes ahead must be astounding! This application is yet another example of corporate wealth running rough shod over the interests of the very citizens that drive their profits, and the manipulation of government bodies that are supposed to be our safeguard to a sustainable and healthy environment. This is a designated UNESCO world biosphere!</p> <p>The damage to homes due to constant drilling and blasting (I live about four kilometers away from the quarry and when they were extracting I could feel the blasts at my home every Thursday afternoon). Who is going to pay the more adjacent homeowners for the very real losses they will endure? There are hundreds of modest homes in the area that have been here for decades and there are many more that have been built since the last quarry application was denied. All of these homeowners have a right to appreciate their homes and the equity they have invested in them.</p> <p>I write this sincerely. However, I believe that on this occasion the needs and desires of the people who oppose this extension, those who live in the area and those who visit regularly far outweigh the benefits that this enormous scar can balance. It has only been eight years since the last attempt made by Nelson Aggregate to expand was denied. This short-lived victory/peace was achieved through substantial effort and financial cost to local residents and concerned citizens alike. I encourage you to feel the burden of that recent decision as well as the present outrage of those opposed to this application as you cipher through the pros and cons, but even more I simply urge you to find the wisdom in denying the application.</p>
1496.	x	Sally	Hewitt	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p>

				<p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p>

				<p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

1647.	x	Marilyn	Hay	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment. While I don't live in the</p>

				<p>immediate area, I have family and friends who do, and who are VERY alarmed by the prospect of this project being approved. Aside from the threats to local water sources, which in themselves ought to be enough to quash this project, it would be a massive blight on the landscape in an area that relies upon drawing tourists to Southwestern Ontario and the Niagara area to support local economies. There are now alternatives to gravel in the construction industry, alternatives which are environmentally friendly, and those alternatives need to be examined and implemented to support the broader Green agenda to reduce damage to our shared environment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

1668.	x	Nick	Gambarotto	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo.

				<p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>
1742.	x	Jeffrey	Ball	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting.</p>

				<p>I am also concerned about the quantity and quality of the fill that is going into the quarry. On a typical summer's day (2020) there were hundreds of trucks per day carrying fill up Guelph Line and then dumped into the quarry, presumably without inspection. On a typical day, there about 1000 trucks going to and from the quarry, with almost all of them passing on Guelph Line posing a threat to people and wildlife, especially where the Bruce Trail crosses Guelph Line and at the parking area on Guelph Line used by Bruce Trail hikers.</p> <p>I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard. I have lived on Guelph Line for 35 years and the future park has been promised for that entire time. The promise is clearly an empty one that the company trots out every time it seeks to expand. The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment. This is forever! If you fail to save the escarpment now, it will be gone forever.</p> <p>Thank you for your time and consideration of these concerns.</p>
1743.	x	Marjorie	Paleshi	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting.</p> <p>I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on</p>

1775.	x	Harold	Smith	<p>I oppose Nelson Aggregates' two new open pit quarries for these reasons:</p> <ol style="list-style-type: none"> 1. The continued and expanded quarrying of Burlington's Niagara Escarpment will have damaging consequences on: <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo; 2. The increased heavy gravel truck traffic on rural roads will result in boosted GHG truck emissions, dust disbursement, vibration, flyrock from blasting; all contributing factors in intensified health risks; 3. Potentially contaminated fill being added to Nelson Aggregate's current quarry site will threaten future well water quality and safety; 4. It will permanently destroy 124 additional acres of prime farmland and green space in the increasingly urbanized GTHA. The need for close-to-market green-space trumps the need for close-to-market aggregate;

				<p>5. The promise of a distant, future park in the current quarry site is unlikely to occur and will never offset destroying these precious open lands in Burlington's backyard particularly during this time of rampant habitat destruction and climate change;</p> <p>6. Quarrying will occur in the worst place to blast: below water table. Headwaters of dozens of creeks, Provincially Significant Wetlands, Endangered Species habitats, unpredictable landscape, springs and sinkholes, everyone relying on well water will be severely affected;</p> <p>7. In 2012 the same basic proposal was refused by every level of government after years of study because of risks to groundwater and species. And yet big capital transnational corps try again.</p> <p>8. Allowing a quarry in A UNESCO WORLD BIOSPHERE RESERVE would be disgraceful and perverse. It would also undermine public trust in the Niagara Escarpment Commission reflecting badly on its judgement, values and ethics;</p> <p>9. The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please reject Nelson aggregate's expansion application</p> <p>Thank you for your time and consideration of these concerns.</p>
1776.	x	Richard	Hainsworth	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. 1785.	x	Aline	Tso	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because we need to be reminded of the difference between what is livelihood, life style and LIFE itself.</p> <p>The Escarpment has two desirable resources : AGGREGATES and WATER.</p> <p>In the process of aggregate extraction, water has to be used; and, ecosystems that make water part of a sustainable cycle is gradually affected as watersheds are eroded.</p> <p>All living species on the Escarpment, whether flora or fauna, are alive thanks to AIR and WATER.</p> <p>Already there are pockets, on the Escarpment, where some species are endangered.</p> <p>I would like to point to my deepest concern with this application. It dangles the vision of a lake for recreation, with no knowledge of how water to fill the lake might materialize in that future.</p> <p>It totally ignores the fact there is a shortage of fresh water worldwide; and the fact the human species is but one of all species needing fresh water to be alive. Aggregate extraction degrades water quantity and quality, accelerates moving towards NO WATER, NO LIFE.</p> <p>Thank you for your time and consideration of these concerns.</p>
1786.	x	Daniel	Curran-Blaney	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World</p>

				<p>Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. 1793.	x	Patty	Duffield	<p>Once a pristine area is gone, it is gone for ever. We need to think about our future generations and not destroy our beautiful greenbelt and all that it has to offer us!</p> <p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p>

				<p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets</p>

				<p>the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>
1835.		Lorretta	Bailey	<p>I am writing to urge you to oppose the recent application (file 505-04/20) made by Nelson Aggregate to change the Official Plan designation and to expand their North Burlington operations. My reasons for opposition are as follows:</p> <p>The notion that the impact of this application going forward will only affect a small neighbourhood is wrong - the truck traffic alone will have a major impact upon everyone living in the immediate area of No. 2 Sideroad, as well as on Guelph Line from as far as Dundas St. to Campbellville. The village of Lowville was established over a hundred and seventy years ago, and an average weekday will see anywhere from thirty to eighty gravel trucks per hour grinding and stalling their way up the steep hills toward the quarry, or inversely popping their engine brakes as they speed away from the quarry and down the hill into the village - and this is at a time when the only real truck traffic to the quarry is bringing in fill and other secondary activities unrelated to extraction. What will it be like when extraction traffic is added?</p> <p>There is the very real danger that heavy trucks travelling through Lowville present to residents (especially to children loading school busses at blind stops). An addendum to this reality is that roughly twenty-five years ago Guelph Line was being considered for widening and greater arterial usage, but this route was ultimately deemed to be too costly and unfit. So why create an opportunity that encourages heavy vehicles to use a potentially hazardous and undesirable route?</p> <p>People lived in the area long before a mineral extraction permit was awarded to the company and I presume that the effects of their increased activity over the years has impacted the area well beyond what was originally imagined. Who better to be a steward of the land than a resident? Also, the area isn't just a few people's "Backyard". It is a designated "World Biosphere" and a backyard to thousands of hikers and visitors every month. People from Burlington, Milton, Brampton, Hamilton and beyond come here daily. Do we need to sacrifice this for the profits of a few?</p> <p>There are already much larger quarries within twenty minutes to the north and to the west supplying the exact product, which translates to an average delivery of said product to sites within almost the same travel time and distance. So, the argument about a</p>

				<p>negative environmental impact due to excessive hauling distances is invalid. Plus which, the other pits have a much better and safer access to main roadways. I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>Also, a quarry will definitely affect those who are dependent upon the water resources beyond the 120 meter envelope, and I avow that the only people who would argue the point are those who are not going to be dependent upon the resource. What catastrophe awaits the home owner dependent upon Nelson's 'well quality guarantee' when their well is failing due to Nelson's activity? A twenty-four hour water delivery guarantee – such comfort! And when that doesn't happen because Nelson can easily attribute your problem to any number of issues that are your concern alone – who will the homeowner turn to then for reparation, the city? Add to this water issue the very deep concern local residents have for the monitoring of the fill which comes in to the quarry daily. There is an enormous amount of water that is being pumped out of the pit at the west end of Colling Road making its way all through the local waterways, which in turn affects the water for a huge number of homes all the way to Bronte Creek and Burlington Bay. Is there monitoring to ensure no toxic elements are being deposited with this fill?</p> <p>The fact that Nelson has put forward yet another version of a similar application within less than a decade of being denied their last one (one that cost local residents a great deal of time, money and anguish), suggests that the amounts of money to be made by them if the project goes ahead must be astounding! This application is yet another example of corporate wealth running rough shod over the interests of the very citizens that drive their profits, and the manipulation of government bodies that are supposed to be our safeguard to a sustainable and healthy environment. This is a designated UNESCO world biosphere!</p> <p>The damage to homes due to constant drilling and blasting (I live about four kilometers away from the quarry and when they were extracting I could feel the blasts at my home every Thursday afternoon). Who is going to pay the more adjacent homeowners for the very real losses they will endure? There are hundreds of modest homes in the area that have been here for decades and there are many more that have been built since the last quarry application was denied. All of these homeowners have a right to appreciate their homes and the equity they have invested in them. My beloved home of twenty years. On this occasion the needs and desires of the people who oppose this extension, those</p>
--	--	--	--	--

				<p>who live in the area and those who visit regularly far outweigh the benefits that this enormous scar can balance. It has only been eight years since the last attempt made by Nelson Aggregate to expand was denied. This short-lived victory/peace was achieved through substantial effort and financial cost to local residents and concerned citizens alike. I encourage you to feel the burden of that recent decision as well as the present outrage of those opposed to this application as you cipher through the pros and cons, but even more I simply urge you to find the wisdom in denying the application.</p> <p>Sincerely yours, a concerned resident of North Burlington</p>
1836.	x	Lisa	Moore	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting.</p> <p>I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. 1841.	x	Sheetal	Rawal	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>Over the years, I have frequented the Burlington area of the Niagara Escarpment as a tourist, trips that have included patronage of local businesses. To have a UNESCO World Biosphere in our backyards is an incredible treasure and quarrying is the wrong use for it. I plan on bringing my infant daughter to the area as she grows, to show her the natural wonders that we are lucky enough to live near. The area should be conserved for future generations, not exploited for the here and now.</p> <p>I also echo the concerns around the negative impact this proposed project will have on the natural environment in north Burlington, including wildlife, streams and woodlands. As well as the negative effect of this project on the quantity and quality of well water, and on the streams and wetlands served by the headwaters of Mount Nemo.</p> <p>The decisions made now by Niagara Escarpment officials will affect residents of the Greater Toronto Hamilton Area and beyond for generations to come.</p> <p>Please decide in favour of our living escarpment and the right of future generations—including my daughter—to enjoy its wonders.</p> <p>Thank you for your time and consideration of these concerns.</p>

1851.		Gord	Pinard	<p>I am writing to you today on behalf of my wife and I, to express our deep concerns about the Nelson Aggregate's proposed quarry extension application.</p> <p>We have lived in Burlington for over 30 years and in 2016 moved into our retirement, dream home on the escarpment. Like so many other residents of the area, we were told about the existing quarry, the denial of the 2004 expansion application and the expectation that the quarry was at the end of it's useful life. The announcement in late</p>

				<p>2019 that Nelson was, once again, going to pursue an expansion of the operation was shocking and disappointing news.</p> <p>We tried to approach this announcement in an objective manner, attending all of the public information sessions, hosted by Nelson, City Council and community leaders, to learn as much as we could about the operation and try to get answers to our concerns. We were initially encouraged to hear that Nelson was a transparent organization that had nothing to hide and was willing to share information about their current and proposed operations to help to allay the fears of the community. Unfortunately, we quickly realized those were hollow promises, and the extent of the Nelson transparency is limited to the single presentation by their consultants and the reports in the application submission – Nelson management has yet to introduce themselves to the community or answer any of the community questions.</p> <p>We have 4 primary concerns associated with the existing quarry and proposed extension:</p> <p>1 - Water</p> <p>We rely on our well as our only source of water and are fearful that the operation of the quarry will negatively impact both the quality and quantity of available water. Given the quarry operates below the water table, the dewatering operation is a significant draw on the same water supply we rely on to service our house. The closer the quarry gets to our house and the longer the dewatering goes on, the higher the threat to that water being available. The proposed quarry extension rehabilitation plan contemplates on-going dewatering that would extend beyond Nelson's presence – who will be liable for well impacts once they are gone?</p> <p>Perhaps more importantly, is the quality of the water. According to the application documents ~1/3 of the trucks that enter the quarry are bringing in waste construction fill. We understand that it is intended to be clean fill but the reality is that there is no way to know that a construction excavation doesn't contain any "hot spots" or unscrupulous soil brokers that take advantage of the lack of controls to slip in contaminated loads. Nelson has acknowledged that they do not test every load (1 in 700 are tested), so we ask – how do you guarantee us and our neighbours that our water will remain safe and free from contamination?</p> <p>2 - Blasting</p> <p>Blasting operations are at a minimum a nuisance with the weekly noise and vibration that interrupt the otherwise peaceful existence on the escarpment.</p> <p>We appreciate there are regulatory limits to protect the community but the application</p>
--	--	--	--	---

				<p>documents confirm that Nelson does not always operate within those limits and when they do have an exceedance, the response to correct subsequent blasts is slow or non-existent. These exceedances, as they get closer to our houses, are more likely to have a negative impact on the structural integrity of our homes. More importantly, the extension also encroaches on a high pressure petroleum products pipeline which if damaged by a blasting event, could result in a catastrophic safety and environmental incident.</p> <p>We also recently learned about flyrock and the serious safety risk it presents to the members of the community – we understand that, although a low frequency event, they are unpredictable and when they occur they can launch microwave sized chunks of rock in excess of 500m. Should one of these projectiles land in the yard of a local family, the consequence could be deadly.</p> <p>3 - Truck Safety</p> <p>Guelph Line, north of Highway 5 is a twisty, undulating two lane rural road used by pedestrians, cyclists and cars and connected to numerous hidden driveways. 600-700 trucks/day on average, fully loaded mixing with people, bicycles and cars is a recipe for a serious traffic accident. We have all witnessed trucks travelling well above the posted speed limit and regional police confirm several examples of mechanical safety infractions. Guelph Line, south of Highway 5 and on Highway 5 itself, although 4 lane roads, are very busy roads before you add in the trucks</p> <p>Although the trucks are not under the direct control of Nelson, the reality is that the existence of the quarry is the reason for all of this truck traffic – no quarry and the truck traffic on the rural roads would drop dramatically, as would the road safety risk to all of the other users of these roads</p> <p>4 - Air Quality</p> <p>Anyone who has driven down #2 sideroad, in front of the quarry has witnessed the mud bath that coats your clean car in a layer of mud and when the mud on the road dries, the dust clouds are significant</p> <p>Nelson claims to have purchased a street sweeper that operates every two hours – there are many days when the street sweeper is nowhere to be seen and when it is in use the dust cloud created seems to be larger than that created by the cars driving through the dried mud</p> <p>More importantly, beyond the dirty cars and dust clouds is the health impact of this dust. Fine particulate matter (PM2.5) is known to be a serious human health hazard which makes these dust clouds so much more than just a nuisance.</p>

				<p>We need more than the sound bites from the consultants presentation. We have real concerns and we want and expect answers. These are tough conversations but they need to occur and if Nelson won't step up with the transparency they promise, we implore the NEC, through the application process to get these answers for us.</p> <p>The decisions made now by politicians and professionals will impact City of Burlington residents for generations to come. Please ensure that safety of our community is not further compromised by the expansion of this quarry.</p> <p>Thank you for your time and consideration of our concerns</p>
1852.	x	Lindsay	Dolan	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>We have lived in Burlington for over 10 years (my husband has lived here his entire life), and we recently moved to Guelph Line in 2018. This was our dream house, until we realized how much truck traffic continues to come up Guelph Line relentlessly every day, but were really looking forward to the day the quarry would cease operations and return this area back to the splendor and natural beauty it deserves.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on:</p> <ul style="list-style-type: none"> • our natural environment in north Burlington, including wildlife, streams and woodlands • the quantity and quality of our well water and on the streams and wetlands served by the headwaters of Mount Nemo • on the value of my home, which is my most important asset and is something that will be devalued should this industrial quarrying operation be permitted • the quality of life for my entire family - with noisy, dangerous trucks speeding up and down the road, relentless dust and tremors felt in the house, this negatively affects our livelihood in an area of Burlington that is intended to be serene and natural <p>I continue to be frustrated by the increasing heavy gravel truck traffic on our rural roads and irritated by the dust associated with these trucks. I am tired of the dust and vibration associated with the blasting and am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am also extremely opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these</p>

				<p>precious open lands in Burlington's backyard.</p> <p>The land we have left in this area for wildlife needs to be protected.</p> <p>The decisions made now by politicians and professionals will impact City of Burlington residents for generations to come. Please decide in favour of a living escarpment.</p> <p>Thank you for your time and consideration of our concerns.</p>

1854.		Nikki	Ferreira	<p>I currently live at [REDACTED] My home is 6 houses north of the current quarry operation and I have lived here now for 11 years.</p> <p>When we purchased this home 11 years ago we were aware that there was an operational quarry however we were also advised after much investigation that the quarry would no longer be operational within 2 years of moving in.</p> <p>Clearly that time line has come and gone and here we are 11 years later fighting a similar fight to that of PERL back in 2008.</p>

				<p>After living here for some time now I have been able to see (and feel) the operations of the quarry.</p> <p>I have made numerous phone calls to the City any By-law department for their operations starting as early as 6:00am. Their machines start up, there is banging going on from trucks on the quarry floor which echo through the area.</p> <p>In February of last year I sent a letter direct to the MNRF with no response to this. Again in September of 2020 there was yet another incident that was escalated due to issues of early morning truck and operation noise by myself and another neighbour. There was a lengthy email chain back and forth with the City by-law department. Over the period of the last month there was an issue on a Saturday morning of banging and operations from the quarry yet again.</p> <p>Time and time again the operations and the operating hours of those at Nelson Aggregates test the already strained relationship with the neighbours with no consideration for us.</p> <p>This is a residential on the Niagara Escarpment and therefore must be treated as such. Over the past couple years I have noticed a large influx of truck traffic on Guelph Line heading into and out of the quarry. The noise level, the dust level, the speeds in which these trucks drive, many are absolutely reckless and have zero consideration for vehicles, cyclists, and pedestrians who share these roads. In the last 3 years I myself have seen at least 3 trucks drive right up onto the property at the corner of Guelph Line and Millar Ct as there was a vehicle wanting to turn left onto No 1 Side Rd. These trucks when they are weighted down travelling at the speeds they do are NOT able to stop safely. This danger has been increasing year after year with nothing being done. We were advised that when the road was being redone last summer that there was going to be a turn lane created to diminish that risk to vehicles however that never was done. To be honest, I don't even know how it could be with the construction.</p> <p>Over the years as my children grew (now 17 and 13) we noticed a large increase in the traffic. At times this past summer during the COVID pandemic we would make a game out of counting trucks headed to the Quarry. On many occasions on our drive from No 2 Side Rd. to Dundas we counted no less than 35 trucks. That is in a span of 2 minutes getting from No 2 Side Rd to Dundas. If that is any indication to how many trucks would be headed in on a daily basis we are looking at hundreds and potentially pushing 1000.</p> <p>In the application and the original documents released by Nelson Aggregates is states that they can not operate in any manner that could be considered a waste land, a dump or to</p>
--	--	--	--	---

				<p>bring fill in for compensation. If upwards of 1000 trucks per day I ask you, what other alternative would there be for that amount of trucks to be entering.</p> <p>The number of trucks coming into the quarry with fill brings me to my next concern. What is in these trucks? What are they bringing in? From where? Any fill that comes into that quarry also potentially enters our water supply that we as residents are dependent on. We all operate on wells to live. We do not have city water, we do not have a commercial sanitization plant. If anything that is brought in is contaminated it would not take long before hundreds of the escarpment residents are permanently and irreversibly impacted. Nelson has been anything less than forthcoming with documentation of their "testing measures or protocol" We are expected to "take their word" that they are being careful. Over the past 2 ½ years the blasts which have been coming from the quarry have become more violent and causing larger reactions. There have been times where I have been sitting in the middle of my home in the family room and the vibration from a blast literally feels like I am in the center of a bomb blast. I feel it coming from the centre of my home and up through it. The china shakes in my dining room. I have had a broken window in our dog pen that I have reported to the quarry however they to this day claim that it couldn't be from them. (I'm not sure what else it would be from considering it is a side fully fenced yard).</p> <p>A recent occurrence at the beginning of April brought multiple blasts from the quarry in a 45 minute period. These blasts were NOTHING like what I have experienced in the 11 years we have been here. After the third blast I called the quarry to see if they were blasting to which I was advised they weren't. It was about 30 minutes later Gail called back to advise that they weren't blasting however the RCMP was there disposing of "suspicious packages". After investigation and a letter from CORE Burlington Inc to the RCMP we found that they were doing a training exercise. Needless to say, is this standard practice or operation of a quarry? Are they licensed to operate as such? There are many other areas the RCMP could conduct their training exercises or at the very least warn the neighbours.</p> <p>At what point is enough going to be enough? The residents of the escarpment have lived with this destruction, noise and dirt for decades. We have a further 22 operations quarries in the Halton Region. We DO NOT need another one. We do NOT need to enable Nelson to destroy some perfect greenspace on the Escarpment. I believe as residents we have sacrificed far too much to ask us to sacrifice further. Nelson has made it clear time and time again that they do NOT have our best interests in mind or are forthcoming or</p>
--	--	--	--	--

				<p>transparent in their operations. Nelson is trying to blow smoke and make an empty promise of this wonderful “greenspace” a “beautiful park”. We have Mount Nemo conservation. Burlington does NOT need another park. This park is at least another 70 years away only AFTER they have depleted the area of any nature. What assurances do we have that they will actually follow through on their “promise”? What would be the consequences for not following through?”</p> <p>I ask you to please carefully review this. Listen to the residents, outside people who are concerned with the applications, the multiple technical experts that have been brought in to review this application and have found countless issues with their findings; many of them even outdated and unchanged since their last application.</p> <p>I ask you to please decline this expansion request in its entirety. Please help us secure the safety and the quantity of our water table that we depend on. Please give us back our enjoyment of living and quality of life so we don’t wake in the morning to the banging of trucks in the quarry, the starting of the belts at 6am. The blasts that have without a doubt compromised the foundations of our homes.</p>

Who want to go for a walk to Lowville park without the perpetual danger these passing trucks bring. Please protect the communities that love and value this beautiful escarpment by rejecting this proposal to blast two pit mines and further develop the quarry.</p> <p>Thank you for your time and consideration of these concerns.</p>
1861.		Linda	Kazienko	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>Natural Environment</p> <p>Based on the information provided in Nelson's application regarding the impacts on the natural environment, we note the following concerns:</p> <p>The report claims that there are no "significant" impacts to local species and local ecosystems associated with the two new pits. But the elimination of the natural environment species, including species at risk, associated with open-pit mining is not insignificant: rather it is an industrial practice with enormous and disruptive impacts on living ecosystems. No "rehabilitation" or enhancement" plan layered over a depleted limestone pit can replace the complex, rich, biodiversity of the prime farmland and</p>

				<p>natural ecosystems that currently thrive in the areas now being considered for permanent destruction from mining. Any disruption, including man-made “enhancements” will lead to a net environmental loss and it must not be represented as otherwise.</p> <p>The community was not consulted about the rehabilitation and enhancement proposals for both Nelson Aggregate’s existing and proposed quarry sites—most notably for the alteration, dredging and grading of the regulated and protected Jefferson Salamander habitats. These sensitive areas must remain off-limits. Nelson Aggregate's proposal to “enhance” the endangered Jefferson Salamander in Provincially regulated and Joint Board ruled habitats, causes very serious concerns about the safety and prosperity of this species.</p> <p>The field surveys were done throughout a very short-period of time, which renders the data unreliable. These surveys underestimate the amount of species that are present in the study area, do not identify/list many fauna and flora species that are known to live in the area, and do not fully explore all the impacts that open-pit mining will have on these diverse and complex ecosystems. For instance, the removal of natural areas that have been classified as breeding grounds for some bat and bird species during the “off-season” will have significant negative impacts on the breeding patterns of these species in the subsequent season. Despite this logical outcome, the report claims that the proposed mining operation will have no impact on the natural breeding patterns.</p> <p>The removal, manipulation, or disruption of the designated natural habitats for Jefferson Salamander must not be permitted. The report provides no studies or evaluations to prove how the proposed off-site "ecological enhancement" plan will serve as a viable replacement for the rich and complex ecosystem that many species, including threatened and endangered species, like the Jefferson Salamanders and Butternut trees currently inhabit, and which is essential to their survival. In the past, Nelson Aggregate has moved endangered Butternut trees for their convenience. Allowing Nelson Aggregate to continue disrupting the natural environment with or without permission is of significant concerns to a number of citizens and organizations.</p> <p>The removal of Halton NHS designated wetlands, watercourses, woodlands are unacceptable; and the impacts on the Grindstone Creek Headwaters Complex Provincially Significant Wetlands are also unacceptable.</p> <p>I am a veterinarian of 37+ years and live across the street from the quarry. In my backyard I have observed Green Tree frogs and Salamanders. If you allow the quarry to expand, then future generations will only be able to look at photographs of these wonderful</p>
--	--	--	--	---

				<p>species. It will be devastating to permanently wipe out these natural inhabitants for the sake of a few tons of gravel. There are other areas in Ontario where granite can be obtained.</p> <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. 1879.	x	Nina	Trask	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I have lived in Lowville for over 20 years and I am a devoted community member who aims to maintain and protect the historic beauty and safety of Lowville and its surrounding escarpment area. As a local resident and citizen of Burlington who values this escarpment area, I hope my community can remain a physically safe, environmentally healthy and residential neighbourhood for many generations beyond my own. For the safety, health and longevity of my home and village, I am opposed to these new quarries.</p> <p>I am opposed because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. <p>These areas will face irreparable damage if this quarry development succeeds and local residents are not considered in the long-term.</p>

				<ul style="list-style-type: none"> • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. Well water has served my home and each of my neighbours for decades, and it continues to dwindle as large-scale developments spread across this area. After experiencing water shortages and quality issues increasingly, I fear for the water quality and general existence of my home's well going forward. <p>Hasty quarry decisions will directly impact the quality of life for those of us that live every day in the area - be it truck traffic, excessive noise, pollution to water/air/soils, or hazardous spills that may cause incalculable harm. Your decisions will affect the protection and enjoyment of natural spaces for all those who live, play and work in North Burlington for generations to come.</p> <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. I am deeply worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water. Irreversible damage and water crises are nothing to consider lightly.</p> <p>I am extremely opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard. There is no way to undo the damage of expanding the quarry, no restoration efforts will be able to genuinely repair these natural rock layers and essential waterways once they're disturbed, and no park could compensate.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns. Please truly consider how this area has been a historic treasure and protected area for over 100 years. It would be deeply saddening for the interests of a few developers to prevail over the wellbeing of long-term residents and many generations to come in the greater escarpment area.</p>
1880.	x	Sara	Bold	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative</p>

				<p>farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>
1942.	x	Peter	Adams	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I believe that allowing such an abuse of the lands within Burlington's Niagara Escarpment UNESCO World Biosphere will make the designation meaningless. If we as custodians of this wonderful piece of the world's biosphere are not willing to completely protect these lands from exploitation then we have failed all future generations.</p> <p>Nelson Aggregates has already been party to a previous application that was finally rejected in 2011 and the communities surrounding the site thought that this was the end of the nightmare so it is absolutely disgraceful to see this corporation come back a few years later with what is essentially the same proposal to continue their destruction of our environment.</p> <p>The lands that Nelson Aggregates proposes to destroy are totally interconnected with areas outside of the physical site proposed and I believe that it is impossible for anyone connected with this development to guarantee the future protection of;</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water in the area and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am further alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. over the time I have resided in the beautiful area there has been an almost exponential increase in the volume of heavy traffic entering and leaving the main site and this can only increase further through its expansion. It is not untypical to count 30+ heavy rock trucks per hour entering the site and this has now been extended such that the trucks are entering and leaving at the weekends. Additionally, it is now very common to see these heavy trucks on Cedar Springs Road which by designation is already a restricted access</p>

				<p>road.</p> <p>The pollution that these heavy trucks bring to the area already makes a mockery of the world biosphere designation and allowing an increase in extraction and consequently truck traffic will destroy this special area.</p> <p>I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water. I regularly see fully loaded trucks entering the site to dump loads and believe this is a disgraceful act of willful vandalism that completely disrespects the land.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>Whilst Nelson Aggregates will argue that they have been conducting operations for many years and that local communities understood this, I would argue that the local communities understood the quarry was there within the context of its original boundaries and mandate and that the companies continual expansion is a flagrant attack on neighbouring communities with little regard for their health and wellbeing.</p> <p>As a resident of the area, I am happy to accept the restrictions that are placed on homeowners when we need to do construction on or properties and particularly as they relate to the preservation of trees and natural habitat for the abundance of wildlife with which we share the escarpment. It is through this lens which I cannot see any possible scenario in which the blatant destruction of over 124 acres of land and habitat, the extraction of billions of tons of rock, the added pollution or the continued dumping of non escarpment fill into the existing or proposed quarry could be considered good stewardship of these world renowned lands.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>
1943.	x	Bobbi	Stewart	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative</p>

				<p>impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. 1964.		Piers	James	<p>I am writing in reaction to the Nelson Aggregate application for new open-pit mine permits in North Burlington which, if approved, will consume and destroy up to vast lands in a much-loved rural area.</p> <p>I have only been a resident in the area for just over 12 years, but I have many concerns about the impact of this proposal. It is not only for me, but for the environment and for others in the community who are closer to the lands proposed for this atrocity.</p> <p>The possibility of negative impacts to at-risk species which are native to this area should, in and of itself, be sufficient to quash the request. The remaining forests, wetlands, and endangered species deserve better than to be subjected to the existential threat of continuing exploitation by Nelson Aggregates.</p> <p>This rural landscape in North Burlington is a gem amidst the hustle and bustle of the surrounding GTA. A great number of people visit the area by car, motorcycle, bicycle and</p>

			<p>on foot enjoy the area.</p> <p>Creating a fictitious future “Mount Nemo Quarry Park” on the lands they have already destroyed will never replace the natural surroundings. If new quarries are allowed, more lands will be lost. Once they are gone, they are gone. You cannot re-create them even in hundreds of years.</p> <p>Aside from the threat to wildlife, there is much concern regarding the impact on the water table. If the water become contaminated, or drops too low, who has the ability to fix the problem? I am the steward of my own property on NEC regulated land; taking great care not to allow chemicals or other contaminants to enter the environment around me. Who at the new quarries will be so careful?</p> <p>Residents very close to the proposed quarry will suffer greatly by the noise pollution and air quality due to the operations. The bulk of the quarry road traffic goes by Guelph Line I presume, but what happens when the truck drivers decide later to divert to Cedar Springs Rd. as a more direct route to their destination?</p> <p>I have been informed that some residents near the existing site now actually suffer from damage to their homes as a result of the blasting. Has Nelson Aggregates adequately compensated each and every one of them? Will Nelson Aggregates compensate owners affected by an expansion for any damages in future?</p> <p>At a meeting of local residents, the company stated that quarries in the Province are subject to multiple regulations dealing with blasting, air quality, water conservation and environmental protection. They also stated that they would take remedial action in case of property damage or effects on water quality. It would be interesting to know how much compensation has been given out to local residents over the last 50+ years by Nelson Aggregates.</p> <p>That gentleman also explained the precautions that the company plans to take to in order to minimize the impact on the community. This means there will be an impact. It is clear that the demand for aggregate and the desire for the profit are more important to the company than anything else. Why should we be the ones to take the downside risks when Nelson Aggregates only exists to make a profit?</p> <p>I hope that any and all elected representatives vote against this expansion application. My hard-earned taxes should go to lawyers that can prevent the corporate greed of Nelson aggregates superseding the needs and desires of the local community.</p> <p>I understand that Halton Conservation have opposed the expansion of the company's</p>
--	--	--	--

				<p>quarrying operations.</p> <p>I too oppose expansion of operations.</p>
1965.	x	Rosa	Banducci	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting.</p> <p>I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. 1966.	x	Margaret	Mair	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment. The damage they will cause far outweighs the promised benefits.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust</p>

				<p>associated with these trucks and, the dust, vibration, and fly rock associated with blasting. I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am, above all, profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. The need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the mere promise of a distant, future park in the current quarry site offsets in any way the destruction of these precious open lands in Burlington's backyard. The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

2082.		Laura	Hladki	<p>I am writing to oppose the proposal of Nelson Aggregate's plans to blast two new open pit mines in the precious and biodiverse lands of Burlington's Niagara Escarpment UNESCO World Biosphere.</p> <p>My family has resided in Burlington for 4 generations now. My Grandparents moved to Burlington from Windsor in 1953, and throughout their lives witnessed the massive changes in the City. My Mom grew up here and raised her two children here. Now I am raising my daughter in Burlington. I hope that my 11 year-old daughter will continue to grow up enjoying the rich lands of Burlington's escarpment and her children will be able</p>

				<p>to as well. She loves to spend time at Mount Nemo, Crawford Lake, Lowville Park, and Mountsberg and there are so many other spots still to discover.</p> <p>I cannot believe that it was almost 20 years ago that I attended a fundraiser for PERL on the Blind Line and there is still discussion of Nelson Quarry expanding. The endangered Jefferson salamander needs protection, not further destruction of it's habitat. Biodiversity is so important for our community at large and around the planet.</p> <p>124 hectares of Escarpment rural land is far more precious than any monetary value that Nelson Aggregate can extract from it. They have failed thus-far to contribute anything back to the community in terms of parkland for all of the destruction they have created. I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The increased activity from Nelson Aggregate would make a lasting impact on Burlington that would surpass the generations that my family have already lived here.</p> <p>The decisions made now by politicians and professionals will impact City of Burlington residents for generations to come. Please decide in favour of a living escarpment.</p>
2083.	x	Gordon	Weatherbee	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. 				<p>I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I live in Puslinch beside a property that was once a farm (in the Greenbelt) and watched it turn into a dump site full of contaminated fill. I was able to finally shut it down but the problem still exists. This fill not only destroys the farmland, but changes watercourses, enters our groundwater and our bodies. Soil and water are not commodities!! We must stop treating them as such and respect them as our necessities of life.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. 				<p>the destruction of these precious open lands in Burlington's backyard. The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>I live in Guelph and pre-pandemic would often take Guelph line down to the Mt. Nemo area to hike, it is beautiful area, not just for local people but for the whole of the western end of the Golden Horseshoe. In addition it is part of the recharging area of so many watercourses that are critical to the health of both urban and rural communities in this area. It is of particular importance, since so much of the surrounding area has been designated for growth by the provincial government and I hope you will ensure that urban sprawl and inappropriate commercial ventures, such as the proposed quarry, do not take the scarce water resources we have and pollute them. I speak from experience, we have many many aggregate mining sites around Guelph, they are huge scars on the landscape, the companies DO NOT rehabilitated them and pour chemically polluted water into our watercourses which also seeps into the bed rock and aquifer. All rural communities depend on well water drink and in addition cities like Guelph depend on ground water for all of our water needs.</p> <p>Thank you for your time and consideration of these concerns.</p>

2133.	x	Miriam	Oudejans	<p>I'm writing to declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment. I believe there are better alternative choices from which to extract aggregate than to proceed with the expansion of the Nelson Quarry. "Because it's there" is not an enlightened rationale with natural habitat and wildlife species already under exhaustive pressure in the GHTA</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water as well as the streams and wetlands served by the headwaters of Mount Nemo. Water flow, capacity, and quality are all significantly disrupted by open-pit mining. The negative impacts on the ecosystem of this increased level of water extraction from the aquifer must be thoroughly investigated and addressed, including 100 year historical data, and 100 year projected climate data. The groundwater and surface water availability has significantly decreased in the last century. <p>I am opposed to the permanent destruction of 124 additional acres of prime farmland and</p>

				<p>green space in our increasingly urban GTHA. I believe the need for close-to-market green-space is a far higher provincial priority than the need for close-to-market aggregate. I am very concerned about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the impact this could have on the future safety of well water</p> <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. The major increase in noise and activity will also negatively affect wildlife populations. The promise of a future park on the quarry site DOES NOT offset the destruction of this valuable natural lands in Burlington's backyard. In addition, There is evidence that artifacts have been found in the proposed quarry expansion area. First Nations representatives should be contacted and allowed to voice their concerns, if any, about this project. If more artifacts are discovered, or human remains, what assurance do we have that Nelson Aggregate will take the necessary measures to protect and account for these? Furthermore, there are no reported procedures describing what Nelson is willing and required to do to protect any potential discoveries.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favour of our living escarpment.</p> <p>Thank you for your consideration of these concerns.</p>

Please decide in favour of our living escarpment.</p> <p>These are the words of the concerned people informing Ontarians and others of impending danger to the area near the Niagara Escarpment. I do know that digging up the escarpment is sometimes spoken of as less harmful because of remediation after the fact - but ongoing impact will continually erode a necessary and what would be a much stronger biodiverse area. We are safer and stronger with nature than with human made materials that erode of living base. There can be no more erosion of nature already designated as requiring of protection, instead we should look for alternatives for our lives, and protect our lives by protecting and advancing nature.</p> <p>Thank you for your time and consideration of these concerns.</p>

2175.		Todd	Jarrett	<p>I'm writing to officially declare my opposition to the application(s) by Nelson Aggregate to blast two new open-pit quarries in Burlington's escarpment. I also submitted these comments online via the ERO and also to the Ministry of Natural Resources.</p> <p>I have lived in Burlington all of my life, and have spent the past 20 years living across the road from Nelson Aggregate. I have watched, listened, and experienced them destroying our natural environment in the name of profits. This needs to end now.</p> <p>The following are my beliefs and opinions and are based on my first hand observations of Nelson's activities over the past 20 years.</p> <p>My well went almost dry (from 8 gpm to less than 1) when Nelson's quarrying activities across the road from my home removed the forest and 60 feet of rock and I believe reversed the groundwater flow from North - South to South- North. The ground water level dropped dramatically of course due to the huge hole in the ground. The remaining water also became contaminated by coliform from septic tanks to the south. A new well had to be drilled in a different location, which I had to argue and demand that Nelson pay for. They eventually did take responsibility for the replacement of the well. Mine is not the only well they have affected adversely. Nelson's latest consultant claimed at the recent public meeting that the new quarries will not cause well water issues because they have not had issues in the past. This is simply not an accurate representation.</p> <p>What happens when wells are again damaged and go dry and this time cannot be replaced? Cisterns are not a viable option. What happens when imported toxic fill causes the water to be undrinkable? Did you know that homes without potable water are considered unmarketable? Is Nelson going to be forced to buy our homes when they cannot replace our potable drinking water?</p> <p>Nelson pleaded guilty to the serious offence of altering a watercourse without permit on</p>

				<p>November 26, 2007. They demonstrated that they don't care about the environment or regulations. I watched Nelson dump silt and dirt into the headwaters of the grindstone creek on the North Side of Number 2 Side Road, which I reported to the MNR and to the City of Burlington and nothing was done. This was in March 2016. To me, this shows ongoing - lasting - lack of concern and care for the environment.</p> <p>Nelson has had regular exceedances of blasting impact limits. I have had windows crack twice when Nelson was blasting near my home. Of course it is impossible to prove they were a result of the blasting - but who among anyone you know has simply had a window mysteriously crack on a Thursday? Twice? Why do they continue to exceed and nothing is done? I believe Nelson don't care - and neither do the MNR.</p> <p>Nelson has operated repeatedly outside allowable hours (at 3am and 5am, for example) causing us to be wakened from our sleep.</p> <p>Nelson operates an asphalt plant that emits toxic chemicals at ground level. How is this allowed on the Niagara Escarpment? This should not be allowed to continue.</p> <p>They use their existing quarry to import untested fill (essentially acting as an unregulated landfill site) and to process imported aggregate and riprap. Riprap that goes unprocessed has been used as fill. Again, how is this allowed on the Niagara Escarpment? Is this indicative of an ethically run company that cares about the environment?</p> <p>I cannot drive my car on No2 Side road if i want to to be clean. The track out from Nelson is massive and unnecessary. It causes more than a nuisance as it contains respirable silica dust. Allowing trucks to cross between a south extension and the current quarry would dramatically increase the dust and also would create significant safety hazards for cars and cyclists. This cannot be allowed.</p> <p>Clearly, I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere has had and will have on:</p> <ul style="list-style-type: none"> - Our natural environment in north Burlington, including wildlife, streams and woodlands. - The quantity and quality of our well water and on the streams and wetlands served by the headwaters of Mount Nemo. - The quality of life for all residents of Mount Nemo and Burlington. <p>I am very concerned that the studies provided by Nelson in support of their applications are inadequate and incomplete. There are many example of issues in the studies and I have not had time to review them all yet. So I reserve the right to comment further to the JART and the MNR&F about my concerns regarding the studies. Some clear misses that</p>
--	--	--	--	---

				<p>stand out are:</p> <ul style="list-style-type: none"> - The air study excludes significant dust emissions from the thousands of loads of fill being brought into the quarry. Wind stripping is also considered negligible in the modeling. Site Preparation and Site rehabilitation are largely ignored. Trackout seems to be completely ignored and is a huge issue. These are all actually current sources of significant ongoing emissions that a complete study would include. Simply measuring the current emissions levels instead of modelling them would show the truth!!! Why model the existing quarry emissions when you can easily and accurately measure them? I have observed huge dust clouds from the trucks delivering fill. I have taken photos and video to show the huge amount of dust generated. I have observed and experience regularly the wind stripping blowing huge amounts of dust. This study is plainly inadequate. - The Visual impact study says the impact on my home will be “moderate”. I can tell you that the impact will be significant. We went from having a view of a forest at grade with our home across the road to having huge (30 foot high) berms across from our home. No view. The West extension promises the same, so the remaining forest we have will be gone and we will see only huge berms. This is not “moderate”. This is unacceptable. - I am extremely concerned about the possibility of potentially contaminated fill being added to Nelson Aggregate’s current quarry site and the impact this could have on the safety of our well water. I can see nothing about managing and ensuring the fill quality in my review of the documents so far. - I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of the Mount Nemo plateau. <p>I believe the need for close-to-market greenspace trumps the need for close-to-market aggregate. In addition, I believe that aggregate from the Milton quarry can be trucked to Burlington with LESS emissions of Greenhouse gases than from the Nelson quarry atop Mount Nemo simply because the diesel emissions resulting from the climb of the escarpment are orders of magnitude greater than level ground travel as required to reach the Milton quarry. So, from an environmental perspective, Nelson’s quarry is not “closer to market” than Milton’s quarry. It’s ‘further’ because it generates more GHG and worse it does so by concentrating them in a UNESCO World Biosphere Reserve.</p> <p>Please decide in favour of protecting the escarpment, and against the quarry. We need quality of life for residents and quality of environment for all, not corporate profit at the expense of residents and the environment.</p> <p>Stop the expansion, and also force Nelson to stop operating in their current fashion as</p>

2191.		Janet	Myers	<p>I've lived in Burlington for fifty-one years, and on the escarpment since 1982. Over the years, I've witnessed the densification of population in the southern section of Burlington, and noted, with pride and relief, how vigorously the NEC has fought to protect the</p>

				<p>precious and irreplaceable natural ecosystems that make up the very special Niagara Escarpment area of this city, which is part of an UNESCO World Biosphere Reserve.</p> <p>As a long-time resident on the escarpment, who has endured for most of my life the truck traffic, the dust, and the worries about flyrock, contaminated imported fill, diminished well water and the depressing realization that prime farmland continues to be permanently destroyed by Nelson Aggregate's nearly 70 years of mining up here, I am long-past ready for this corporation to be gone. We've done our time with quarrying. We've listened to the broken promises about the quarry shutting down "in the next five years". We've endured an eight year battle to stop the last application from Nelson (for virtually the SAME land!) that was denied in 2012. The local residents don't trust Nelson Aggregate...so the reports that they have submitted in support of their application, and the assurances they declare to mitigate this and that, are all suspect. Nelson Aggregate has no credibility in my eyes.</p> <p>Open-pit mining is one of the most destructive industrial practices on earth. It is incompatible with a rural-residential area. It is incompatible with an area that provides habitats for endangered species such as the Jefferson Salamander. It is incompatible with an area where the only source of water for the many families who live here is an aquifer that these new below-water-table pits threaten with depletion through continual pumping, and with pollution from the in-filling of the current 540 acre pit with inadequately tested construction fill, which could leach toxic substances into our drinking water.</p> <p>A decision to quarry an additional 124 acres from the escarpment will thunder through many future decades: it is a decision that cannot be undone, cannot be mitigated. I insist the NEC do everything in its power to stop this latest application from Nelson aggregate. Please decide in favour of the living escarpment, which the Niagara Escarpment Commission is duty-bound, morally-bound, and legally mandated to protect.</p> <p>Thank you for your time and consideration of these concerns.</p>

2208.		Elaine	Saric	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am completely opposed to this application and I urge you to put a stop to it for the sake of the community and the preservation of this magnificent ancient biosphere reserve. The cumulative negative and potentially devastating impacts of quarrying and loss of fragile escarpment ecosystem to a mega open pit mine in our city is an absolute travesty and utter nightmare for me, my family, and our entire city.</p> <p>I am concerned about the availability and quality of our drinking water. Contamination of our drinking water related to quarry pit dewatering and backfilling the open pit with un-tested material is a real risk.</p> <p>I am concerned that the truck loads of fill being dumped (by the hundreds) each day contains materials that may leach contaminants into the aquifer. It is unacceptable that these truck loads are at best sporadically tested. Nelson's studies do not deny that the aquifer will be impacted with continued and expanded mining. The aquifer is the only source of abundant and safe drinking water for local wells, and I believe that safe, abundant drinking water should never be compromised. We are NOT prepared to accept a cistern with imported city water when our well runs dry or becomes contaminated.</p> <p>It is hard to imagine how Nelson aggregate could possibly be allowed to delete hundreds of beautiful CO2 absorbing trees on the site of the Burlington Spring Golf course, meanwhile adding to CO2 emissions amid a climate emergency. Nelson's reports do not adequately account for CO2 emissions. Taking into consideration that gasoline/diesel-fueled transportation is one of the biggest emitters of greenhouse gases in Canada, CO2 emissions must be included in the report, also considering the number of trucks not owned by Nelson that are bringing in trucks daily. CO2 emissions from other activities, such as asphalt production, must also be included in the assessment to render a more accurate estimate of CO2 emission levels. The City of Burlington has declared that the city be carbon neutral by 2050. To achieve this critical goal, these types of CO2 emissions (from all trucks, blasting, processing, asphalt production, stripping overburden, etc.) must</p>

				<p>be considered when assessing this application.</p> <p>I am deeply concerned about the short and long-term health issues associated with inhaling air contaminated with fine dust particular under 2.5 micron resulting from blasting and exhaust from the hundreds of trucks that pass through the quarry daily. There is dust created by the blasts, and there is dust and exhaust pollution created by the trucks ploughing their way across No. 2 Sideroad, and up and down Guelph line. We chose to settle outside the urban area, specifically to get away from pollution, automotive exhaust and particulate matter that could irritate our eyes, nose, throat, and lungs. Another major concern I have is with the structural risks associated with blasting. I am concerned about the stability of our home and its foundation with explosions happening in such proximity to us. Our home is completely up to code, but 'code' does not imply it was built to be rattled by explosives daily and withstand the cumulative effects of these vibrations over long periods of time. I am deeply concerned about future damage and the long-term stability of our home living in such proximity to an active aggregate mining operation.</p> <p>The lands the Nelson Aggregate hope to obliterate are not only home to hundreds of people, but to hundreds and animals and species of wildlife too. From the white-tailed deer to the magnificent birds, and bats, to the endangered Jefferson Salamander, there exists an intricate web of life on Mt. Nemo that lies in a delicate balance. There is no doubt that the risks to living things outweighs the "close-to-market" argument of the aggregate industry, looking to make a quick buck.</p> <p>For all these reasons and more, our family whole-heartedly rejects this application and is absolutely opposed to our officials allowing this application to move forward, knowing the risk it poses to the community, including the health and families and stability of our homes, to the impacts it will have on our cherished greenspace north of Dundas street, a UNESCO world heritage biosphere reserve. I believe that an expansion of the quarry adversely impacts the purpose and objectives of the Niagara Escarpment Planning and Development Act and is clearly against the Escarpment's mandate to protect biodiversity. Burlington needs to put an end to the destruction of the escarpment and to seek solutions to prevent any further abuse of our wetlands and the repeated decimation of our rural escarpment lands.</p> <p>Thank you for hearing my concerns.</p>
2209.	x	Debbie	Wickham	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p>

				<p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World Biosphere will have on</p> <ul style="list-style-type: none"> • the natural environment in north Burlington, including wildlife, streams and woodlands. • the quantity and quality of well water and on the streams and wetlands served by the headwaters of Mount Nemo. <p>I am alarmed by the increasing heavy gravel truck traffic on rural roads, the dust associated with these trucks and, the dust, vibration, and fly rock associated with blasting. I am extremely worried about the possibility of potentially contaminated fill being added to Nelson Aggregate's current quarry site and the threatening impact this could have on the future safety of well water.</p> <p>I am profoundly opposed to the permanent destruction of 124 additional acres of prime farmland and green space in our increasingly urban GTHA. I believe the need for close-to-market green-space trumps the need for close-to-market aggregate.</p> <p>I do not believe that the promise of a distant, future park in the current quarry site offsets the destruction of these precious open lands in Burlington's backyard.</p> <p>The decisions made now by Niagara Escarpment officials will impact the citizens of the Greater Toronto Hamilton Area for generations to come. Please decide in favor of our living escarpment.</p> <p>Thank you for your time and consideration of these concerns.</p>

2284.		John F.	Foster	<p>I am commenting on the application from Nelson Aggregate to create two new open pit mines in on the Niagara Escarpment near Burlington.</p> <p>The application must not be approved because continued quarrying negatively impacts Niagara Escarpment UNESCO World Biosphere in the area of north Burlington.</p> <p>The continued quarrying will have the following effects:</p> <ol style="list-style-type: none"> 1. The natural environment including wildlife, water courses and forested areas will be degraded and reduced by any quarry expansion. 2. Water tables will be lowered in the area of the quarry affecting wells of adjacent households and communities. 3. There will increased sediment loading in water courses in the area. 4. Safety hazards will be caused by debris thrown up by the blasting of the rock. 5. The Niagara Escarpment will undergo additional permanent alteration as a natural

				<p>feature by the creation of 50.181 hectares of new quarrying.</p> <p>6. Use of non-standard fill in the quarry would impact the aquifer that supplies water to adjacent households and communities.</p> <p>7. Safety hazards on rural roads will increase with the transit of gravel carrying trucks. Since the area is already regarded as a UNESCO World Biosphere site, additional quarrying of the significant landscape feature of the Niagara Escarpment is illogical. The designation is meant to protect the area for the coming generations of people who will inherit this natural from us. It behooves us to preserve it from further degradation in the form of additional quarrying. Also, the additional quarrying is not in the spirit of the Niagara Escarpment Plan and the current Ontario Government's plan to expand the greenbelt. I make the following recommendations:</p> <ol style="list-style-type: none"> 1. Deny this application taking into consideration the Niagara Escarpment's UNESCO World Biosphere designation and what natural environmental effects an additional 50.181 ha of quarry development will have on the Escarpment and adjacent area. 2. Consider the safety hazards that additional quarrying would bring. Additional traffic on rural roads means extra maintenance and additional monies paid out in taxes by citizens. 3. The water table in the area has already been lowered by the existing quarry. Additional quarrying must be denied on this basis because of the extra cost to adjacent households and communities to deepen wells and the effect on the aquifer. 4. The existing Niagara Escarpment is a precious landscape that is under constant pressure and further development must not occur. Much of the Escarpment is still under its original forest cover or is being farmed. Quarrying degrades the natural beauty of the landscape and the pleasing views of it when seen from above by air, from walking through it on the Bruce Trail or from a distance by vehicle. <p>The decisions made on this issue by the Niagara Escarpment Commission will affect citizens of the area and indeed, the Greater Toronto Hamilton Area from now and into the future. I would please advise you to favour the Niagara Escarpment over a quarry. I trust you will make a considered decision.</p> <p>I am thanking you for your time and the consideration these comments.</p> <p>I trust you are all well and good in this pandemic time.</p>
2285.	x	Aisha	Janjua	<p>I'm writing to officially declare my opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p> <p>I am opposed to these new quarries because I am deeply concerned about the negative impact that the continued quarrying of Burlington's Niagara Escarpment UNESCO World</p>

2299.		Ken	Richards	<p>We are writing to officially declare our opposition to the application from Nelson Aggregate to blast two new open-pit mines in Burlington's escarpment.</p>

				<p>We have been residents of this area for 23 years. We moved from 72 acres of rural property to rural Burlington and we love this community and city. We own two properties in this area, and both will be significantly impacted by the proposed new quarry operations. We are located adjacent to Cedar Springs Road and Sideroad No. 2, within a few hundred meters of the proposed limits of the new quarry operations.</p> <p>We are seriously opposed to this application for the following reasons:</p> <ul style="list-style-type: none"> • The impact on the well-being of our local community o The right to quiet enjoyment of our homes and properties o Additional heavy truck traffic <p>§ We do not have sidewalks or bike paths, therefore our recreational outlet for biking, walking, running and movement throughout our community is along the roads. Due to the quarry activities, the roads are constantly dirty, increasingly busy, and unsafe with the truck traffic</p> <ul style="list-style-type: none"> o Noise from trucks, equipment and blasting operations o Dust and pollution from blasting, trucks and equipment • The desecration of the natural environment which has been recognized by world authorities such as UNESCO o Enjoyed by local rural residents o Enjoyed by residents of the surrounding urban areas (Burlington, Waterdown, Milton etc.) for biking, hiking, nature walks, photography etc. • The values of our properties will be substantially impacted by continued industrial and mining operations in such close proximity to our homes. • The detrimental impact on the quality and quantity of our only water supply (drilled wells) <p>We are all responsible to steward the resources that have been entrusted to our generation. In this particular case we are charged with the responsibility to protect a world recognized portion of the environment which has many endangered species both of plant life and animal life. Not only is the Niagara Escarpment recognized in the eyes of the United Nations, but also by our local and provincial governments as well and as part of the green belt; it deserves inalienable protection and consideration against destruction and development, and incompatible land uses. If we fail to do this at this time, then we are robbing not only our generation (both rural and urban), but also all future generations of the enjoyment of this creation. Once it has been destroyed, it is gone forever.</p> <p>We have spent our careers in the engineering, design and construction industries and we</p>
--	--	--	--	--

				<p>know that there are always many options to resolve any particular challenge. This situation is no different. There absolutely are better options and alternatives than to locate a new aggregate mining operation in an environmentally sensitive, protected, and residential area. The balance of proximity to market and increased profits are not acceptable reasons to destroy irreplaceable portions of our local Burlington natural environment. In short, we have no objections to the quarry or quarry operations in general (when compatible with the local vision and land use), however, we have vehement objections to the location of this operation where it is very clearly only to the benefit of Nelson Aggregate and at great cost to our residential community and surrounding neighbors who enjoy this area. The repercussions of poor planning and inappropriate choice of location for this new operation by Nelson Aggregate should not fall to our communities. As with the previous application, this clearly is not in the best interest of the local community, City of Burlington or Region of Halton, Niagara Escarpment Commission nor the environment.</p> <p>As we view these applications, we would consider that the fact they are adjacent to the existing quarry operations makes them no more valid than if they were located several miles away. It is our understanding that they are applications for new quarry operations and do not meet the current zoning bylaws nor the official plan of the city and the region. If these applications are approved, it would set a precedent for such operations or other similar industries anywhere on this protected area of the escarpment.</p> <p>We understand the current demands on our elected and appointed officials; There are many present circumstances which are pressing, urgent and immediate and we appreciate the challenges involved in managing all of these. This situation is also very time sensitive as the decisions made regarding the proposed quarry expansion will affect the future and shape of our community for many generations to come. It requires immediate commitment and action by our Municipal, Regional and Provincial Governments to protect our environment and our communities. We all stand united in our vision of a safe, beautiful, clean and vibrant residential and recreational neighbourhood, for local residents and our neighbours to share in these benefits.</p> <p>In the words of our Burlington Mayor Meed Ward in a recent Maclean's magazine article about the best communities in Canada 2019:</p> <p>"It's that combination of world-class attractions as well as a 10 to 15 minute drive from agricultural farming, hiking, skiing," she says. "There's nothing like it in this region. I don't think there's anything like it in Canada."</p>
--	--	--	--	---

				<p>Our local municipal government is doing a fantastic job of protecting our urban communities from inappropriate development in sensitive areas, as it should. It is also essential that they protect our rural communities from incompatible and destructive development and land use as well. Otherwise, in the years ahead, we will not be considered one of the highest rated and most desirable communities in our country to live and raise a family. We the residents of rural Burlington, stand united with our municipal government in this fight.</p> <p>We thank you for the opportunity to express our concerns and voice our expectations. Understanding the issues and concerns and everything that is at risk, we trust that our elected representatives will vote against this application. Furthermore we trust that they will allocate all of the necessary resources, time and efforts of our regional and city staff, as well as our hard-earned tax dollars to the hiring of lawyers and experts who will fight to protect Burlington's exceptional escarpment.</p> <p>Thank you again for your time, consideration, attention, and support.</p>

2332.		Hendrika	Slagter	<p>It saddens me to learn that the City of Burlington dare ask for donations to oppose the Nelson Agg expansion. The City's Fathers have no idea how important the quarry is for today's economy. It has been a source for local construction and mostly for local road base and asphalt for years before most of the City in Council where born. I read all the negatives about the enviro and the like, let me tell you. It's the best limestone in the area and it's various assortment and quality local people deal with. Would you rather have the materials trucked in from far away? By clogging Hwy 5 ect. Since everyone is so concerned about carbin mon. By trucking it from from far away. Your not making sense, not allowing expansion. Besides, the economic spin-offs, is not considered?</p>
2333.		Ryan	Gravis	<p>I would like to add my following comments against the development if they are not already present from other Residents.</p> <ol style="list-style-type: none"> 1. Significant loss of green space on the west extension 2. Loss of agricultural land On the south Extension 3. Major traffic increase across 2nd Sideroad 4. Loss of jobs from the Closure of Burlington Springs GCC 5. Increased traffic along Cedar Spring will increase noise. 6. Impacts to well water levels and water quality for all residents
2334.		Dan	Palmer	<p>I am a resident who lives near the Nelson Aggregate quarry, residing at [REDACTED] [REDACTED] My understanding is that your blasting activities are strictly limited to a maximum vibration limit and that you're required to monitor these limits for each and every blast to ensure that you're operating within the stipulated limits. I have noticed a variety of "shakes" from your blasts over the past years and, while I haven't previously written or documented the dates/times, I have noticed two very violent blast while working from home on my property over the last week. I would like to bring these blasts to your attention and formally complain as they had very violent impacts on my home. These blasts occurred on or about: 1. April 6, 2022 at approximately 1:05pm; 2. April 13, 2022 at approximately 11:56am. I would kindly request that you please provide your blasting readings for these events from your blasting monitors to ensure they were within stipulated limits (they certainly didn't feel that way from here).</p>

2335.		Pitz	Pam & Tom	<p>We are Pam and Tom Pitz, residents at [REDACTED] We are jointly expressing our view regarding the Nelson Aggregate Co. application under the Aggregate Resources Act, our previous objection letters, and the further "Notice of Objector Response" wherein we have until August 15, 2022 to reply.</p> <p>Let us first say that our original objections began in a respectful and thoughtful manner with a heavy dose of common sense. We are not anti-business or anti-development, but not at all cost. Our objection took into consideration the obvious evolution of environmental concerns over the last few decades, the latter something that Nelson would have been fully aware of with ample time to research alternatives for their business success. We are sure the requirement to obtain a license to expand the current pit was put in place many years ago because of some wise individuals who understood that circumstances, and science, can change. No doubt, Nelson discussed this provision on numerous occasions and had decades to prepare their plans. We have been party to various information sessions and discussions including those lead by Nelson and/or an "expert(s)" under their employ, and/or through local resident efforts. We also did our some of our own research to the extent feasible.</p> <p>We now view this whole exercise as a complete waste of time and effort. In fact, we acknowledge that this email, in and of itself, will be of little use in the collective effort to stop the Nelson quarry expansion.</p> <p>Nevertheless, we are responsible citizens who feel obliged to register our thoughts and observations. In our view, our efforts have been of little-to-no-value for the following reasons:</p> <p>1). There is a clear "conflict of interest" when "experts", who are paid by Nelson, lead and/or play major roles in the information sessions. Biases clearly exist even when considering the respect due to individuals who pride themselves with having personal and business integrity. It is human nature and any reasonable person understands that fact. We know the argument is that someone has to pay for the experts and it should be the applicant. However, the bias remains and the lack of trust continues.</p> <p>2). There never has been, and never will be, sufficient resources, financial and otherwise,</p>
-------	--	------	-----------	--

				<p>for those impacted (personal and business residents) to hire “experts” who may have opposing views from those hired by Nelson. It is just a simple fact that sets the stage for a unfair advantage to the applicant from the beginning. We say this, not in the sense of winners and losers, but with the understanding that the opposing parties should be seeking the best possible outcome with all things considered.</p> <p>3). While one can say the voices of residents have lead to considerable amendments, may we suggest this is fundamentally misleading in terms of the process employed. As senior citizens and business folks, we have been around long enough to realize that the applicant would have developed and implemented a strategy to begin with something close to the minimum, thereby providing room for negotiation and/or to give the impression that they have been flexible. However, if truly acting in good faith, we believe the applicant and their experts would have had the knowledge and goodwill to incorporate the current amendments in the original plan in the first place.</p> <p>4). History has shown that “experts” can be wrong, and in some cases unwillingly negligent in protecting the interests of all stakeholders. Time and time again, assumptions and best efforts proved to fall short. We recognize hindsight is 20/20, and we cannot reasonably contemplate all unexplained changes that impact the basic assumptions, but it seems to us that this is much different than simple business miscalculations. This is an unspoiled, extraordinarily important piece of nature that, once cultivated for Nelson’s business purposes, will never (NEVER) be returned to its natural, pristine state. It is irreversible. All the plans for rehabilitation fall short in that context. We understand all this after taking into consideration the offsetting technical and legal arguments such as trade-offs on local development, transportation of aggregate, etc.</p> <p>In our view, the City, Region, Conservation Authority, NEC and Provincial Deparatment , etc., have let the residents and taxpayers down. The ability to oppose Nelson’s plans were futile from the beginning. It has been a complete and colossal waste of time resulting in massive disappointment with those who are there to protect the limited natural and pristine lands we have in this area. In fact, we are reluctantly expending our time and effort to prepare this response since we realize the momentum is far beyond anything we can impact, as a single resident, or as part of a residents group working together.</p>
--	--	--	--	--

				<p>In summary, we feel betrayed, outnumbered, and frustrated beyond description. However, we also remain resigned to the fact that this email will fall on deaf ears and the “horse left the barn” from the beginning despite any argument you may make go the contrary. This is why residents normally give up, and why applicants normally see the consultation process as nothing more than a costly irritant, rather than any real deterrent. We have seen this time and time again.</p>
2336.		Tony	Sevelka	<p>Folks, no resident, worker or visitor of the Town of Caledon or any other municipality in Ontario should ever be subjected to the despicable conduct of the aggregate industry. The aggregate industry is notorious for running roughshod over the rights of innocent third-party victims, while the industry earns rapacious profits destroying the environment and using neighbouring properties as a dumping ground for their deleterious impacts (i.e., <i>adverse effects</i>). Santa Clara County compiled and issued the review of violations taking place at the Lehigh Quarry and Cement Plant in unincorporated Cupertino, California. The Housing, Land Use, Environment and Transportation (HLUET) Committee reviewed the May 19, 2022, report, and forwarded the report to the Board of Supervisors for its consideration. The report reviewed records from 15 local, state and federal agencies, as well as the record of pending and past litigation, between Jan. 1, 2012, and Dec. 31, 2021. More than 2,135 violations resulting in millions of dollars in fines and penalties were identified [against Lehigh Quarry and Cement Plant]. As the scale of aggregate operations become increasingly larger, there is a corresponding increase in the short- and long-term adverse impacts, the duration of public complaints, and potential law suits. A general list of major concerns and complaints expressed by residents adversely impacted by blasting quarry operations compiled by the San Diego Union-Tribune (Oct 18, 2009)[2] is reproduced below:</p> <ul style="list-style-type: none"> • They [quarry operators] destroy communities; • They cause nervous, health, and sleep disorders in their communities; • People move away. Good luck selling your seriously depreciated house, though—to whom?... [unsuspecting home buyers are often unaware or uninformed about the adverse effects of residing near a blasting quarry operation, and overpay]; • They are fined constantly by authorities. Sort of like a parking ticket. It’s just a minor cost of business; • They poison groundwater supplies with the deadly benzene runoff from the ammonium nitrate explosives;

			<ul style="list-style-type: none"> • They damage houses with the blasts: e.g., cracked plaster, structures shifting off foundations. (...[N]ote that in the Massachusetts Web site..., the insurance companies won't cover the tens of thousands of dollars' damage from nearby mining companies.); [and] • Huge pieces of "flyrock" (isn't that a quaint new term!?) land as far away as three miles from the mine blasting, terrorizing residents and damaging houses (amazingly only one killed so far). Check the Nashville, Tenn., Web site for flyrock details of several nearby interstate highways closed down after huge boulders land on the road. The death was in West Virginia, of a little boy killed in his bed by flyrock smashing through his bedroom window. [emphasis added] <p>The impact of a particular land use on neighbouring lands is clearly a key concern, which is shared by common law jurisdictions. The loss of amenities by noise[[3]] and air pollution, increased traffic, increased demands on municipal services, or other disruptions, may conveniently be referred to as "neighbourhood effects". The minimization of such adverse effects on surrounding owners or the community as a whole is one of the principal objectives of zoning controls.</p>
2337.	Tony	Sevelka	<p>Ladies and Gentlemen, attached is a short paper, for me, Votorantim Cimentos (St Marys/CBM)'s "Corporate Rap Sheet" and Colourful History. The aggregate industry, including Votorantim Cimentos (St Marys/CBM), bandies about demeaning terms such as "sensitive receptors" or "neighbouring receptors," both of which are code for human targets (i.e., real people) whose health, safety and welfare they intend to jeopardize! The aggregate industry and the proponent-driven Planning Justification Reports prepared on their behalf have been used to mislead Municipal and Regional Councillors and Municipal and Regional Planners about the separate and distinct function associated with Land Use Planning involving a request for rezoning and official plan amendments, which is entirely separate from the requirements associated with seeking a licence from the Province (Ministry of Natural Resources and Forestry) to operate a Pit or Quarry.</p> <p>Aggregate Resources Act (ARA) Licencing Requirements Do Not Pre-empt a Municipality's Jurisdiction Over Land Use Controls</p> <p>Licencing requirements pursuant to Section 12 of the Aggregate Resources Act (ARA) do not supersede a municipality's jurisdiction over land use controls and land use compatibility (avoidance of adverse effects), as described in Kevin Matthews/Robin Latimer v. Gorham (Township), (2020),[1]</p> <p>[84] Section 12 (1) of the ARA, which requires that a licence application provide</p>

			<p>information on “any planning and land use considerations,” does not displace a municipality’s role or jurisdiction in determining zoning issues, but instead actually highlights the municipality’s role. This principle is laid out in <i>Carlyle Development v. Baldwin (Township)</i>, 2017 CarswellOnt 7658 (“Carlyle”) at paragraph 35: Section 12(1) of the ARA sets out matters to be considered by the Minister in deciding whether to issue an aggregates licence, including the effect of the operation of a proposed quarry on nearby communities and planning and land-use considerations. Also, the Provincial Standards require that a licence application provide information on “any planning and land use considerations”. The Board finds that these provisions do not displace a municipality’s role or jurisdiction in determining zoning issues. They reinforce the point that MNRF considers a municipality’s land-use planning decisions associated with proposed quarry sites when deciding whether or not to issue a licence, thus highlighting a municipality’s role in this regard.</p> <p>[87] In <i>Ottawa (City) v. Sample</i>, 2001 CarswellOnt 4408 (SCJ), (“Sample”), the OMB considered the evidence that supported an environmental assessment, because it was presented in support of an Official Plan amendment. In paragraph 15 of <i>Sample</i>, the court stated: “It would be unprecedented to require the OMB to decline its independent jurisdiction to decide whether an undertaking is good land use planning or not, simply because an undertaking has received an approval from the Ministry of the Environment.</p> <p>[88] <i>Sample</i> underscores the principle that the same evidence may be, and often is, considered by several authorities as they make related decisions on an application. This is exactly the situation in this matter—LRPB was required to make a decision on the planning merits of the ZBL application. A future ARA licence application is a separate and distinct process with its own approval that is undertaken under a separate regime and jurisdiction, notwithstanding that some of the same information may inform both decisions. [emphasis added]</p> <p>As always, the recipients of this email and attachments are free to use, circulate or post this email and the attachments in any manner they wish.</p> <p>If anyone has any questions, I can always be reached at [REDACTED]</p>
2338.	Tony	Sevelka	<p>Here is an admission from Lafarge, which is Nelson Aggregate Co.’s partner in the application to expand the blasting Nelson Quarry in Burlington, that residents within 500 metres would be subjected to adverse effects, which effectively constitute nuisance and trespass.</p>

			<p>Also, in the article which quotes Bill Langer, a geologist who spent 40 years with the US Geological Survey, it states that blasting below the water table destroys the subsurface strata, changes water flow, and because soil and water left in worked-out quarries are thick with iron, manganese and phosphorous, most former quarry sites are hostile to vegetation hindering any “real” prospect of rehabilitation.</p> <p>Lafarge Admits Quarry Operation is a Nuisance</p> <p>As disclosed on its website,[1] with respect to the operation of the Seebe Quarry in Seebe, Alberta, Lafarge readily admits residents of any development within 500 metres of the Seebe Quarry would experience a number of adverse effects from blasting quarry operations, which effectively constitute nuisance and trespass. Lafarge expects neighbouring residents to run for cover whenever Lafarge decides to initiate blasting. Lafarge has no legal authority to force residents to evacuate when they blast, nor does it have a legal right to prevent and sterilize the use of neighbouring third-party properties. Blasting is an ultrahazardous activity and any damage caused to third-party personal or real property is held to strict liability regardless of whether blasting has been conducted within regulatory limits.</p> <p>The sandstone and shale quarries are active and have approval to operate with industrial lighting 24 hours a day, seven days a week.</p> <p>Lafarge has no plans to close or reclaim these quarries in the short or medium term and expects to use the quarries beyond 2070 to support Lafarge’s modernized, Exshaw Cement Plant.</p> <p>This means that residents can expect:</p> <ul style="list-style-type: none"> • Noise and vibration [and flyrock[2]] caused by regular blasting activity • Noise from breaking material and equipment operations • Up to 100 trucks a day leaving and then returning to the quarries each day • Airborne dust from quarry operations. <p>Evacuation potential during blasting</p> <p>The proposed development area near Seebe is within 500m of our Shale Quarry operation. For any blasting that takes place, Lafarge employs a 500m exclusion zone to the front of the blast and 200m zone to the side of the blast. Considering the location of this proposed development, there is the possibility that the area would have to be evacuated for safety during blasting. When evacuation is not required, residents can expect to feel vibration and airblast from the blasting due to the</p>
--	--	--	--

				<p>saturated nature of the ground surrounding the bow river.</p> <p>Rehabilitation of a Worked-out Quarry in a Hundred Years or More, a Questionable Prospect, and Hardly an “Interim Use”!</p> <p>There is no “real” prospect of rehabilitation to an economic use for a worked-out quarry that has become a lifeless water-filled and contaminated crater.[3]</p> <p>Aggregate mining in Texas yields billions of dollars but leaves behind a pockmarked landscape.</p> <p>When Ranger’s lease expires, in June 2023, it will mark the end of 173 years of mining at the site, where the area’s distinctive Cordova Cream and Cordova Shell limestone has been extracted since 1850. What comes next, though, is uncertain. Corbin Van Arsdale, the mayor of Cedar Park, says the city’s goal “was to get the land and do something positive with it, without knowing quite what that is.”</p> <p>Developers have some mixed uses in mind already, but before anything can be built on the quarry, Cedar Park must contend with the massive crater that decades of mining has left behind, along with the environmental and safety hazards that come with it. That process is known as “reclamation,” and it’s something many Central Texas cities may soon contend with as new homes replace old mines and as environmental concerns lead communities across the state to fill in mining craters. But reclamation isn’t easy. Fully rehabilitating mining sites requires replacing soil, preventing pollutants from inhibiting plant growth, correcting the flow of water into and out of a quarry, and reversing species loss caused by decades of mining—essentially, making a poisoned piece of land pristine once again.</p> <p>Environmental groups aren’t sure that process can repair all the damage done by mining, but, “If you do it right, you can get pretty close,” says Milann Guckian, president of Preserve Our Hill Country Environment, which is part of Texans for Responsible Aggregate Mining, a coalition of landowners and environmental groups advocating for stiffer quarrying legislation. “Anything is better than leaving it a dangerous, toxic pit.”</p> <p>Explosions have rocked the Lime Creek Quarry site continually since two years after the end of the Mexican-American War. That’s more than a nuisance to the residents of nearby subdivisions. It’s literally changing the landscape. Bill Langer,[4] a geologist and quarry reclamation consultant who worked for more than four decades with the U.S. Geological Survey, says years of blasting can fracture underground caverns, rerouting natural water systems and displacing local species. The soil and water in quarries are often left thick with iron, manganese, and phosphorus, making most former quarry sites hostile to vegetation....</p>

2339.		Tony	Sevelka	<p>Ladies and Gentlemen,</p> <p>Attached is my most recent research paper Quarry Blasting and Deadly Flyrock: The Hits Just Keep on Coming!</p> <p>I have spent the past three years researching and writing about the adverse effects, including the potentially deadly consequences of Flyrock, associated with Blasting Quarry Operations.</p> <p>The research that I have independently undertaken and the papers that I have authored have been prepared on my own time and at my own expense without any direct or indirect benefit (financial or otherwise) from any person or legal entity. The work amounts to hundreds of thousands of dollars at the hourly rate that I normally charge for work as a forensic real estate appraiser.</p> <p>The purpose of my research and writing has been to inform and educate members of Provincial parliament, municipal and regional councilors, municipal and regional planners, real estate brokers, real estate appraisers, mortgage lenders, and the general public, in particular those communities under the threat of aggregate extraction by a self-serving industry whose sole objective is to generate rapacious profits, all at the expense of the environment and those communities in proximity to an existing or proposed Blasting Quarry operation or Pit.</p> <p>Flyrock, the ultimate adverse effect of a Blasting Quarry Operation, has been concealed from the public by the aggregate industry and the self-serving studies prepared on its behalf by explosives engineers and planners only too willing to aid and abet their aggregate clients in putting the health, safety and welfare of impacted communities throughout the municipalities of Ontario at risk.</p> <p>Provincial agencies such as MNR and MOEC have been complicit in compromising the health, safety and welfare of the public by concealing the dangers of flyrock, an inevitable by-product of blasting rock.</p> <ul style="list-style-type: none"> • MNR was made well-aware of the dangers of flyrock following a Coroner's Inquest

				<p>into the death of a homeowner who was fatally struck by flyrock launched following a quarry blast in Coboconk, Ontario, after it penetrated the roof of his house, c. 1993.</p> <ul style="list-style-type: none"> • MOECP has known about the dangers of flyrock for decades. MOECP has still not issued a public advisory regarding the dangers of flyrock, even after 2013 when the Supreme Court of Canada in the Castonguay case ruled that flyrock is an adverse effect and “contaminant,” and noted that the “fly-rock could easily have seriously injured or killed someone,” when in November 2007 flyrock penetrated the roof of a nearby residence, landing in the kitchen. • Neither MNRF nor MOECP has ever publicly published a “definition” or “explanation” warning the public of the dangers of flyrock to the health, safety and welfare of the community. <p>As they are all legally and morally obligated to protect their citizens, Members of provincial Parliament, regional and municipal councillors and regional and municipal Planners must educate themselves on the dangers of flyrock, as well as the other adverse effects associated with Blasting Quarry Operations.</p> <p>Blind acceptance of proponent-commissioned studies, in particular the Blast Impact Assessments (BIAs) and Planning Justification Reports (PJR) prepared on behalf of the aggregate industry, cannot go unchallenged and accepted at face value. There are too many horror stories of communities across Ontario that have been victimized, and continue to be victimized by the adverse effects associated with Blasting Quarry Operations.</p> <p>As always, the recipients of this email are free to use and circulate this email and attachment (research paper) in any manner they consider appropriate.</p> <p>Respectfully submitted, Tony Sevelka Resident, Concerned Citizen and Forensic Real Estate Appraiser [REDACTED] [REDACTED]</p>
2340.		Tony	Sevelka	<p>The two attached published papers, which are now posted online in the respective journals, should be of assistance to the Ministry of Northern Development, Mines, Natural Resources and Forestry in developing, enacting and implementing appropriate policies and statutes that protect the health, safety and welfare of the public, including quarry employees, from the adverse effects of aggregate extraction operations as required by statute and common law.</p> <ul style="list-style-type: none"> • The Aggregate Resources Act (ARA), as it currently stands, fails to protect the public, including quarry employees, from any of the adverse effects (as defined in the Environmental Protection Act and

				<p>the Provincial Policy Statement) from aggregate extraction operations. • Flyrock, the most dangerous adverse effect of a blasting quarry operation, is not addressed in the ARA so as to protect the environment, quarry employees, and the people who live, work and play in the surrounding communities. In fact, flyrock is not even defined in the ARA. I would urge MNRF to adopt the following definition of flyrock: Flyrock – means any material propelled through the air from a blast[1]and can be gravel, rocks, tree trunks, construction materials, mud – even water.[2] • Flyrock has the potential to injure, permanently disable or kill both humans and non-humans, at distances in excess of 1,000 metres from the blast site, as shown by the 195 flyrock incidents that I have discovered, documented and analyzed Of the 195 discovered, documented and analyzed flyrock incidents, 33 resulted in death, indicating a kill rate of 16.9%, and 40 people were injured in the same 33 flyrock incidents • Flyrock is an unavoidable byproduct of blasting rock, and is not a rare event as claimed by the aggregate industry and its explosives engineers. Flyrock can be like a meteoric shower of debris (e.g. rocks of all sizes, shapes and weights) launched in all directions and a considerable distance. • The proponent-driven “Blast Design Report”, which the explosives engineers misleadingly label a “Blast Impact Assessment,” only addresses noise and vibrations under static environmental conditions and unknowable subsurface soil conditions, and is devoid of any mention or analysis of flyrock. Furthermore, the adverse effects of blasting are unique to every occupied structure/residence (sensitive receptor – code for human target) surrounding a proposed quarry, as each structure/residence is built/renovated at a different time under various building code standards using different building materials, and each structure/residence is different in style, dimensions and layout, all of which are unknowable in the preparation of a (misleading) proponent-driven “Blast Impact Assessment.” Most structures/residences are not designed to a “fortress standard” and cannot withstand the structural damage caused by repeated blasting. • The maximum permitted vibration criteria in Ontario is 12.7 mm/sec, but a review of selected international standards indicates Germany has a vibration limit as low as 5.08 mm/sec, which is intended to eliminate the possibility of even minor structural damage and shattering of fragile contents (e.g. crystal, china, glassware, dishes, wall-mounted paintings, etc.) and to substantially limit citizen complaints and lawsuits. • The Blaster-in-Charge is not required to possess a license demonstrating competency, and the blaster is free to arbitrarily determine the onsite setback before setting off each blast (detonating explosives), coming as close as 30 metres to the lot boundaries, making both onsite employees and offsite humans and non-humans vulnerable to the</p>
--	--	--	--	--

				<p>potentially deadly consequences of being struck by flyrock debris. • None of the adverse effects (including the contaminant flyrock) listed under both the Environmental Protection Act (EPA) and the Provincial Policy Statement (PPS) are permitted to leave the quarry (or pit) site, but how this is to be accomplished remains a mystery, especially with a woefully inadequate setback of 30 metres under the ARA. Not even noise and vibration can be contained on a blasting quarry site with a 30-metre setback. Flyrock debris, which is uncontrollable, is known to have been launched great distances, exceeding 1,000 metres, and is far more dangerous than discharging fireworks. (The personal use of fireworks in some jurisdictions such as the Town of Caledon became illegal as of April 26, 2022, By-law No. 2022-022 (See attached)). Only a licensed individual is permitted to discharge fireworks, subject to issuance of a permit from the Town, but “not within 300 meters of any industrial premises, agricultural premises or place where explosives, gasoline or other highly flammable liquids or gas substances are manufactured or stored in bulk; and not within 300 meters of a hospital, nursing home, home for the aged, church, school, day-care or other similar type of occupancy unless a Discharge Permit and the consent of the owner is obtained.) • The Ontario government has been complicit by permitting the aggregate industry the unlawful and free use of third-party property surrounding blasting quarry operations and failing to ensure that aggregate operators provide their own 500-metre setback onsite. Blasting quarry operations are not entitled to the free use of third-party property as a dumping ground for all the adverse effects associated with a blasting quarry operation (e.g., noise, vibration, toxic fumes, flyrock, etc.) so as to permit more onsite aggregate extraction and more profit at the expense of innocent property owners, whose properties sustain permanent losses in property value, and, ultimately, result in a reduction in the municipal property tax base. Sterilizing the use and enjoyment of third-party property is unlawful, and constitutes a de facto taking (i.e., expropriation), for which every impacted third-party property owner is entitled to be compensated. • The Ministry has a dismal record of overseeing and monitoring the conduct of the aggregate industry, effectively allowing the aggregate industry to regulate itself to the detriment of the environment and its inhabitants. The Ontario Provincial Government needs to reduce vibration limits and amend the ARA by imposing a permanent mandatory onsite setback of 500 metres (no longer leaving it to the discretion of the (unlicensed) blaster-in-charge to arbitrarily decide the onsite (floating) setback before initiating each blast) on every application seeking a license to permit a new blasting quarry operation or to expand an existing blasting quarry operation. As a further safeguard, the ARA needs to be</p>
--	--	--	--	---

				<p>amended to require every blaster to be licensed as a demonstration of competency. (Even the detonation of fireworks, arguably less dangerous than detonating explosives at a quarry) in a number of jurisdictions requires that the individual be licensed.) Attached is my research paper BLASTING QUARRY OPERATIONS: LAND USE COMPATIBILITY ISSUES AND POTENTIAL PROPERTY VALUE IMPACTS published in the December 2022 issue of the Journal of Environmental Law & Policy. Attached is my research paper Preventing the Potentially Deadly Consequences of Flyrock: Mandatory Minimum Setbacks and Separation Distances Required published in the December 2022 issue of the Journal of Natural Resources. If you have any questions, I can always be reached at [REDACTED]</p>
