

Enbridge Gas Ontario Notice of Upcoming Project Cedar Springs (Burlington) Community Expansion Project

This notice is to inform you of an upcoming Enbridge Gas Ontario (Enbridge Gas) project in the community of Cedar Springs in the City of Burlington, Ontario. The purpose of the project is to supply the community of Cedar Springs with natural gas service. The project will be primarily located in Burlington and will involve the construction of up to approximately 6 kilometers (km) of natural gas pipeline in the road allowance of Britannia Road, Cedar Springs Road, and Cedar Springs Court, as well as a portion of 2 Side Road and Medad Springs Court.

Enbridge Gas has hired a third-party environmental consultant, Stantec Consulting Ltd. (Stantec), to initiate the Environmental Study for the project. The study will be conducted in accordance with the Ontario Energy Board's (OEB) "Environmental Guidelines for the Location, Construction, and Operation of Hydrocarbon Projects and Facilities in Ontario, 8th Edition (2023)" and will include a consultation program, impact assessment and a cumulative effects assessment.

The Environmental Report based on the study is scheduled to be completed in Fall 2025, after which Enbridge Gas plans to file a Leave to Construct Exemption Application for the project with the OEB. The OEB's review and approval is required before the proposed project can proceed. If approved, construction could begin in 2027.

Enbridge Gas is committed to undertaking consultation and engagement with stakeholders and Indigenous communities as an integral component of the planning process. Additional details regarding the project and how to become involved during the consultation and engagement process will be provided in future correspondence. Should you have any questions or comments during the development stages of this project, or input regarding potential alternative routes or natural environment features within the area please contact the undersigned. Input will be evaluated and may be considered within the route evaluation for the project.

Note: The potential project location has been developed for purposes of an assessment of potential environmental and socioeconomic impacts and does not represent the final project scope/design that will provide access to natural gas to end-use customers.
